**Project Title:**

Online School Management system
---------------------------------

**Short Description:**

<p>This is a Desktop Application that can help to maintain the regular activities of a online school as simple as possible. In this system there will be three (3) different users. They are Admin, Student and teacher. These users can access their informations from their levels. Here, the user Admin has the top priority. He/ She can access His /Her own information as long as acces and manage others information. Admin can monitor the whole activities on daily basis. If there is any change in information, Admin can do. On the otherhand, Student has the capability to see their marks,class routine which has chosen by the Teacher.</p>
---

Three different user

1-Admin

2-Student

3-Teacher
